

OM1 Platform

Roadmap Planning 2025

Jan 2025

Strategy translates Mission/ Vision into a well-defined Roadmap

Mission

Rapidly improve real world patient outcomes using real world data/ evidence + AI

Vision

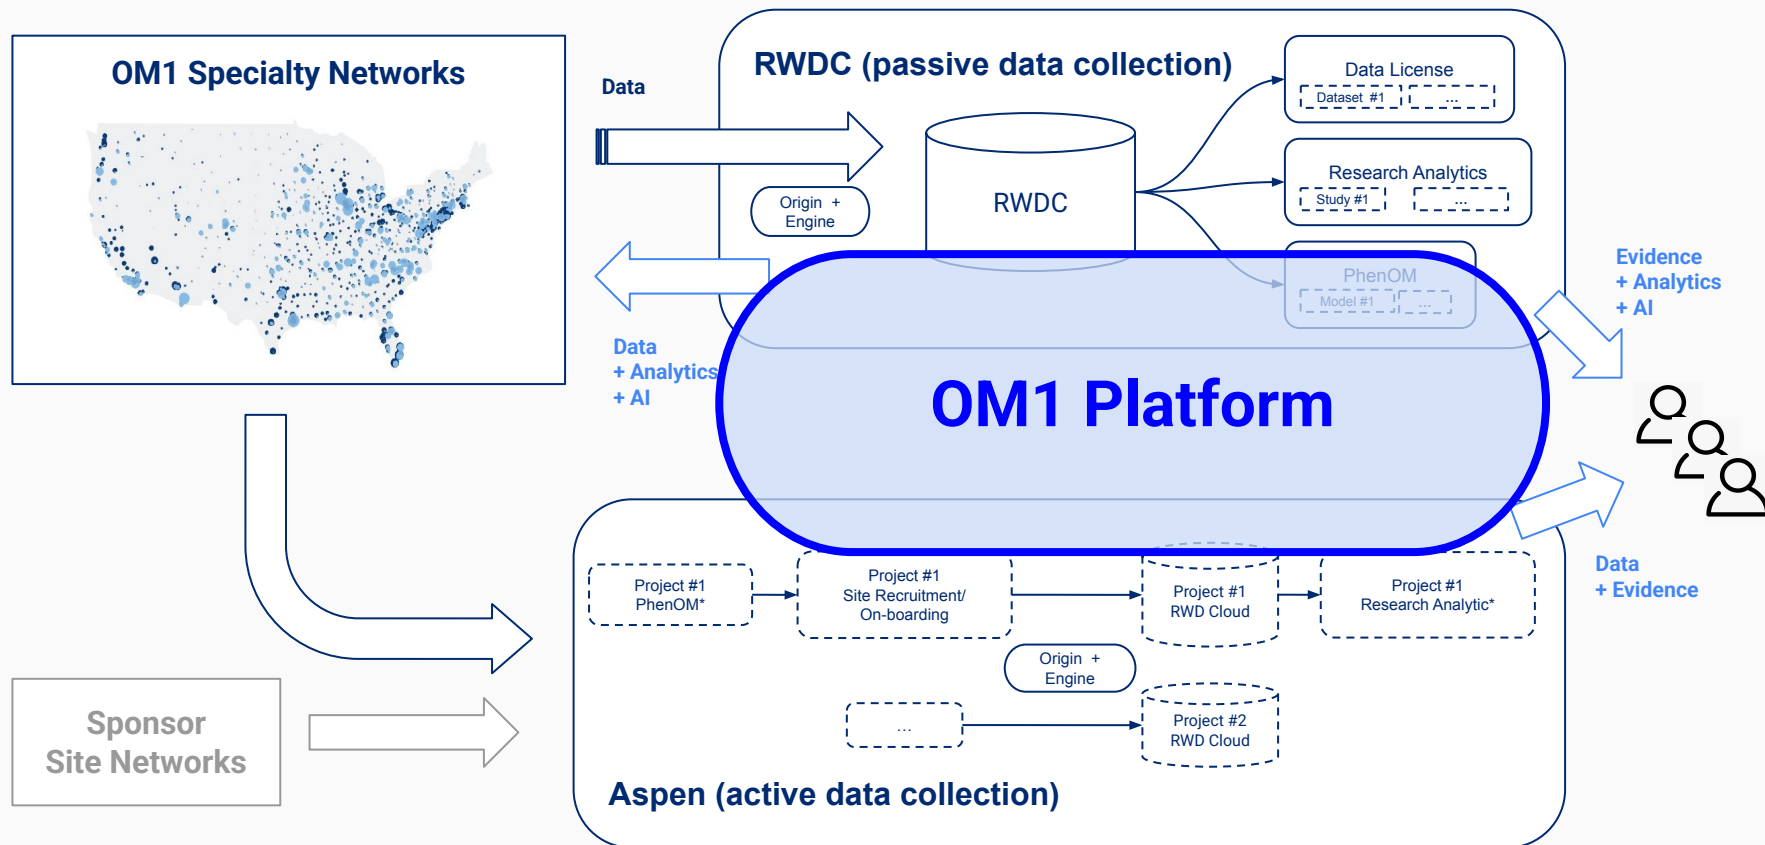

From RWD to RWE + AI in minutes instead of months

Strategy

??

Context #1: Platform = Centerpiece of Value Delivery

Context #2: Platform Currently Delivers Most Value at “Consideration” Stage

Customer Journey

Consideration

Conversion

Delivery

Value creating activity

Value charging activity

Pre-Platform			Post-Platform			
Value Delivery UX	Target Customers	Drawbacks	Value Delivery UX	Target Customers	Benefits	Value Delivered YTD (\$)*
Email, spreadsheets, slidedecks	All	Lots of requests Slow with lots of back and forth	Cohort Explorer	Data License, Research Analytics	Fast, custom counts Can test criteria interactively Can generate counts without sales request	\$XXX,XXX cost saving (or \$XXXk per quarter) <i>Up from \$XXXk per quarter last year</i>
SOW doc	All					\$XXX,XXX revenue supported <i>Up from \$XXXk last year</i>
CSV (data), Report doc (evidence, analytics), Support docs	All	Slow data delivery Deals with Channel Partners not possible	Dataset Delivery, Data Studio	Channel Partners, Data Partners	Fast data delivery b/c dataset is already defined in CE Can redelivery based on specific needs	\$XX,XXX cost saving <i>Up from \$XX last year</i>
				*Link to cost/ value estimate spreadsheet		\$XXX,XXX+ total

Context #2: Platform Currently Delivers Most Value at “Consideration” Stage

Why is this important?

Our products/ services often need to be customized so that “consideration” very often means a non-trivial feasibility analysis

We should think about our Platform as a way to streamline consideration, feasibility and delivery

Context #3: How the Platform Can Drive Growth and Efficiency Downstream

Growth Opportunities

Action	Goal	Outcome
Push Platform access to more users/ possible customers	100% clients who ask for a sales count get access to the Platform	Increase # of possible deals to drive revenue potential
Build support for Aspen consideration (ie Site ID)	Aspen site feasibility done via the Platform	Increase # of possible deals to drive revenue potential
Add other applications that allow us to scale consideration stage for other OM1 products/ services	Build and launch "PhenOM Engine" application	Increase # of possible deals to drive revenue potential
Add new analytics capabilities and applications to the Platform (harder b/c these are unproven markets)	Generate \$XXk revenue from paid access to applications on the Platform	Increase revenue by adding a new revenue stream

Efficiency Opportunities

Action	Goal	Outcome
Push Platform usage internally	100% sales counts done on the Platform	Reduce costs of consideration and conversion
Add capability for more complex counts and/ or study feasibilities	Rapid Insights and Research Analytic feasibilities done on Platform	Reduce costs of consideration
Automate dataset delivery	100% dataset deliveries done by the Platform	Reduce costs of delivery

Context #3: How the Platform Can Drive Growth and Efficiency Downstream

Growth Opportunities

Action

Push Platform

Build successful

Add other stage for

Add new Platform

Efficiency

Action

Push Platform

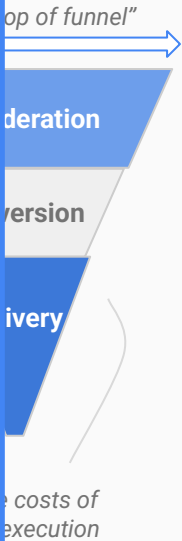

Add capabilities

Why is this important?

The Platform can both drive growth and reduce costs because
(a) software is low cost, and
(b) software can be scaled more easily to drive growth

For (b), we should think about growing the Platform using a funnel like:

Acquisition > Activation > Retention > Monetization

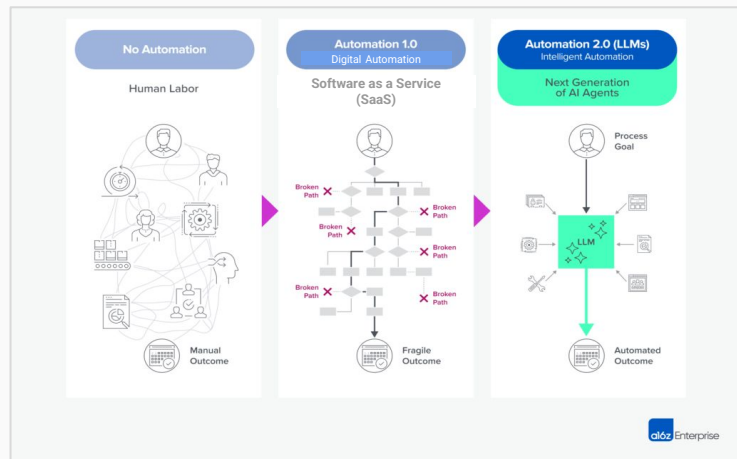

Add capabilities	done on Platform	
Automate dataset delivery	100% dataset deliveries done by the Platform	Reduce costs of delivery

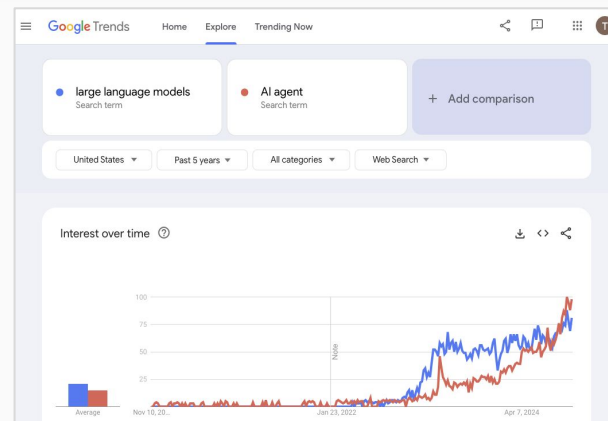

Context #4: Rise of “Intelligent Automation”

Large language models (LLMs) are a new technology that creates a massive opportunity for businesses to transform how they create and deliver value

In particular, LLMs are well-suited to “intelligently” automating processes/ tasks and dramatically reducing time/ costs of value delivery

[Source](#)

[Source](#)

The screenshot shows the ATROPOSHEALTH website. The main heading is "ChatRWD™". Below it, the text reads: "The first generative AI application to deliver full observational studies on healthcare data in minutes." A sub-headline states: "A breakthrough in rapid real world evidence." At the bottom, there is a "LEARN MORE →" link. On the right side, there is an image of a laptop displaying a software interface with various data visualizations and charts.

Not just hype, we know one of our customers is using Atropos

Strategy: “Intelligent Automation” for RWD/ RWE + AI

1. Streamline Feasibility/ Consideration and Value Delivery

Continue to invest in automating high-cost or slow activities from “feasibility to value delivery” in order to reduce costs and add value (e.g. speed, customization, etc). This is about making it easy to define assets (e.g. datasets) customized to user needs and make it as fast/ simple as possible generate value from those assets (e.g. generate RWE).

2. Drive More Revenue by Expanding Our Consideration Experience

Continue to invest in improving our consideration experience. We’ve already invested in Cohort Explorer to support consideration for our data products, but we can expand applications to support consideration of our other solutions. We should also prioritize applications with higher revenue potential and market demand, because those will have higher ROI.

3. Intelligent Automation

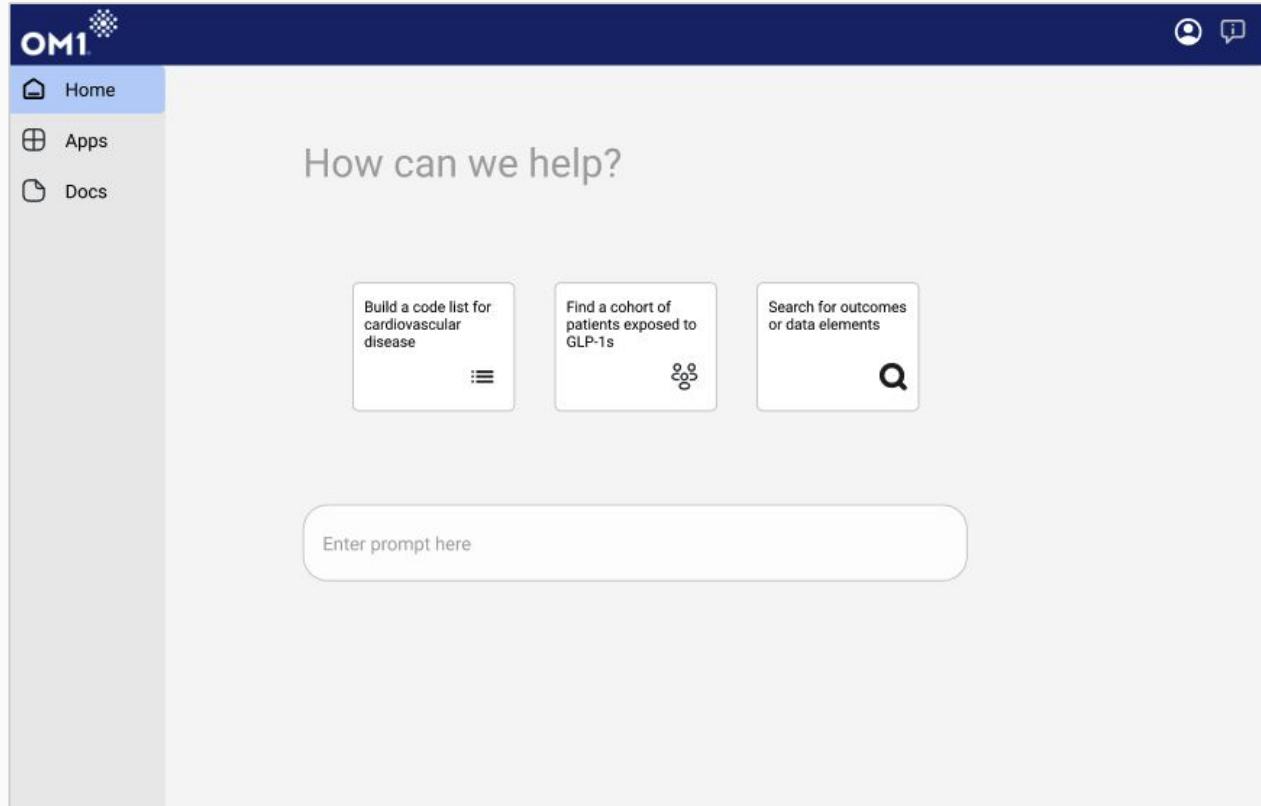

LLMs/ AI agents have created a massive opportunity to transform how we produce and deliver value. We should try to leverage it as much as possible to accomplish #1 and #2.

A close-up photograph of a person's hand holding a stylus, poised to write on a tablet. The background is out of focus, showing bokeh light effects. The text 'The solution' is overlaid in white on the left side of the image.

The solution

**An intelligent automation
platform for end-to-end
RWD/ RWE and AI**

Solution Design: AI Agent Layer

AI centric/ native layer

Users can get started easily with example prompts

The LLM agent can access APIs and docs to coordinate what the user needs

APIs are the same as the the digital apps, so users can also access “point and click” UI/ UX if they prefer

Solution Design: AI Agent Chat Example

The screenshot shows the OM1 AI Agent Chat interface. On the left is a sidebar with a 'Data' section containing 'Code Lists', 'Cohorts', and 'Datasets'. The main chat area displays a user query: 'Can you create a new cohort of patients that have been exposed to GLP-1s and also have key outcomes for the following conditions: NASH, Heart Failure, parkinson's disease and Alzheimer's disease ?'. The system responds with status updates: 'Finding relevant code lists...' and 'Building cohort...', both with green checkmarks. A 'Sources' button is visible. The system then provides a summary of the GLP-1 cohort with outcomes in the relevant condition areas, followed by a table:

Cohort	Criteria	Patient count	Percent
1	2 GLP-1 exposures	1,159,073	100%
2	Linked EHR and medical claims	847,201	73%
3	Has at least 1 NASH, HF, ALZ or PD key outcome within 3 months of index date	139,901	12%

Below the table, the system asks: 'Would you like to refine these cohort further, or do you want to create a dataset based one of the cohorts in this list? If you want to build a dataset, please specify which cohort to use.' At the bottom is a text input field 'Enter reply here' with a send button.

A user might ask to define and create a cohort and the AI agent would

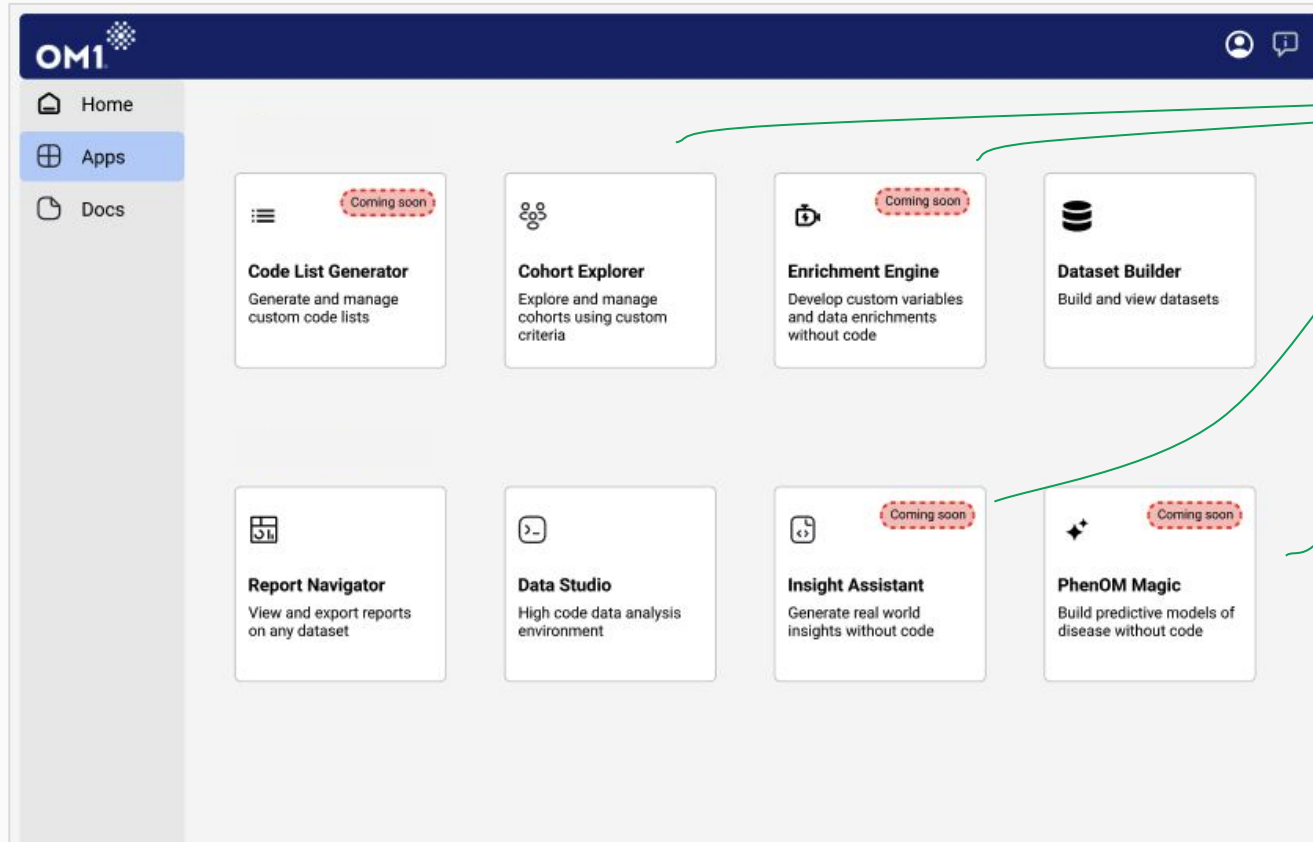

- Create a code list
- Build a cohort

But then the user can to the Code List app and make small adjustment manually

.. or adjust the cohort

.. Or view results in a more of a dashboard/ app like interface (rather than in chat)

Solution Design: Application Layer

Growth driver

Digital apps
(supported by APIs)
still the backbone of
the Platform

Users can use apps
as normal via UI/ UX
if they choose to

2025 Roadmap

Q1

AI assisted cohort building

Fast, streamlined cohort to dataset workflow

Apps home page redesign

Q3*

PhenOM Builder

Monetization/ billing

Q2*

Enrichment Engine

Code List Generator

Integrate documentation, knowledge base and search

Q4*

Insight Assistant

Unified AI agent UI

*Tentative, pending market/ customer feedback

Jun

Jul

Aug

Sept

Oct

Nov

Dec

Monetization (usage-based option)

Pricing model

- Usage-based
- Also tiered

Allow users free access

Give users “credits” (similar to other GenAI tools) where they can only generate outputs if they have enough credits

Features that require credits:

- Cohort creation
- AI agent analysis
- PhenOM model creation
- etc

Free

**\$0 per month
per user**

Small # of free credits

Professional

**\$50 per month
per user**

Moderate # of credits
