Olivia Robinson (87F)

Subject ID	DOB	Age	Sex	Provider	Last Visit
24051642	1937-12-29	87	Female	Provider B	2025-05-15

Clinical History Summary ▾

87-year-old female with a history of glaucoma, heart conditions including cardiomyopathy and heart failure, atrial fibrillation, and a transplanted organ.

Risk Type		Time Period		Outcome	Risk Trend	Risk Value	Last Updated
Relative	Absolute	12 Months	24 Months				
>	Emergency Department	Risk of an emergency department visit			1.60x Avg: 11%	2025-01-01	
▼	Hospitalization	Risk of a hospital admission			3.19x ↑ Avg: 6%	2025-01-01	

Risk Analysis: The patient's high risk of hospitalization is likely due to the combination of advanced age, heart transplant status, and multiple chronic cardiac conditions including heart failure and atrial fibrillation.
